SUMMARY

Seven years in a technical role, during which I independently designed and built two internal systems to remove operational bottlenecks. Software Engineering student at Inatel, working on both ends: React and TypeScript interfaces and Java and Python services, with relational data modeling and REST API integration. My edge is spotting the process bottleneck before writing the first line of code — it comes from seven years working inside operations. Available immediately for remote roles or on-site positions in southern Minas Gerais, Brazil.

TECHNICAL SKILLS

- **Front-end:** React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Vite and REST API consumption.
- **Back-end:** Java (Spring Boot), Python (FastAPI), REST API design and development, layered architecture and object-oriented programming.
- **Data:** PostgreSQL, MySQL and MongoDB — relational modeling, SQL queries and schema maintenance.
- **Tools & practices:** Git/GitHub, Docker, Vercel, automated and manual testing, agile methodologies (Scrum/Kanban) and CI/CD fundamentals.

PROJECTS

- **Personal portfolio — leonardosferreira.dev:** self-built website in React + Vite, with a custom domain and continuous deployment on Vercel. End-to-end project, from visual direction to launch.
- **BHV-Transfer:** Java/Spring Boot backend for chunked uploads and secure storage of files over 1 GB, built to remove a limit that was blocking the company's operations.
- **GpsReportInatel:** Java desktop application that automates the standardization of reports with geolocation data, replacing a repetitive manual process.

PROFESSIONAL EXPERIENCE

Analyst & Internal Solutions Developer

Behive Tecnologia — Santa Rita do Sapucaí, Brazil | Jan 2019 – Aug 2026

- **Development:** designed and built two internal systems (BHV-Transfer and GpsReportInatel) on my own, from scoping the problem to delivering the solution.
- **Requirements gathering:** worked directly with clients and operations to understand needs, align expectations and translate business rules into technical solutions.
- **Quality & data:** technical validation of operational reports, compliance with internal standards and data structuring for submission to external systems.

EDUCATION

Bachelor's in Software Engineering — in progress

Inatel (National Institute of Telecommunications) — Santa Rita do Sapucaí, Brazil | Expected graduation: December 2027

Electronics Technician, Industrial Automation track

ETE FMC (Technical School of Electronics) — Santa Rita do Sapucaí, Brazil | Completed

AWARDS

- **1st place — Construtech Hackathon 2025:** AI-based solution for process optimization, built as a team.
- **1st place — Construtech Hackathon 2024:** project combining hardware and software to solve a complex industry problem.
